

Quality Policy

We are committed to delivering high-quality products and services that support the safe development and manufacture of At-211 based radiopharmaceuticals. We are committed to maintaining high standards of quality, innovation, regulatory compliance and customer satisfaction, with patient and operator safety as a guiding principle.

Customer Focus

We strive to understand and meet the expectations of our customers.

Our objective is to deliver products and services that consistently meet customer and, applicable regulatory and quality requirements.

Regulatory Compliance

Our operations are aligned with applicable regulatory requirements and relevant GMP principles, proportionate to our role as a supplier. We apply a risk-based approach to ensure appropriate governance and lifecycle control of our products and services.

Continuous Improvement

We are committed to the continual improvement of our Quality Management System, processes, products, and services through systematic review, risk management and performance monitoring to ensure ongoing effectiveness.

Employee Involvement

Our employees are the cornerstone of our success. We promote a culture of quality, accountability and competence, encouraging active participation and ongoing development.

Innovation

We embrace innovation in our technologies and processes to meet evolving industry needs and to provide reliable, compliant, and forward-looking solutions.
